STATEMENT FROM MC TANK TRANSPORT INC.

MC Tank Transport, Inc. remains committed to supporting our Toledo neighbors as cleanup continues following last week's chemical release at our facility on Progress Avenue. We are grateful for the continued work of local, state and federal responders. Toledo is home to hundreds of our employees and their families, and we care deeply about this community.

We know this incident has disrupted lives, raised concerns and affected residents and businesses throughout Toledo. We sincerely apologize for the worry and hardship this has caused.

To continue to help the community, MC Tank has established a claims reporting line for individuals and businesses. Anyone who believes they have suffered a loss because of this incident may call 888-271-0577. All claims will be given serious consideration and review.

Since the incident began, our team has been on site, working with emergency responders, U.S. EPA, Ohio EPA and environmental specialists to support the response and assess conditions. MC Tank also engaged three experienced environmental and hazmat response firms - Onterris, ONYX Exposure Science and Specialized Response Solutions. Representatives from all three firms were on site in Toledo within 24 hours of the release.

With evacuation orders lifted, our focus has shifted to the ongoing cleanup, continued environmental monitoring, and the investigation surrounding the incident.

The U.S. EPA in its latest update at noon on Oct. 27 noted: "Air monitoring and sampling data have not shown detections of glycidyl methacrylate or other hazardous chemicals above screening levels."

While much progress has been made and continues to be made, we recognize that residents and businesses have questions about the incident and what comes next. We're committed to providing regular updates on cleanup progress and continuing to work with City of Toledo officials to keep the community informed. Environmental data collected by MC Tank and its partners is being shared with U.S. EPA, Ohio EPA and Toledo Fire & Rescue, and new findings will be shared as they become available. For the latest official updates and environmental monitoring information, residents can visit U.S. EPA's incident response page at <https://response.epa.gov/ToledoGMARelease>.

We appreciate the continued efforts of emergency responders, environmental experts, and City leadership. We'll continue working closely with the agencies involved and sharing updates with our Toledo neighbors as cleanup moves forward.
